

SMARTBRIDGE PROJECT SUBMISSION

Auto Ticket Classification using Flow Designer

PHASE 6

Project Testing

Technology: ServiceNow – Flow Designer

Role/Project Area: ServiceNow Administrator

1. Testing Objective

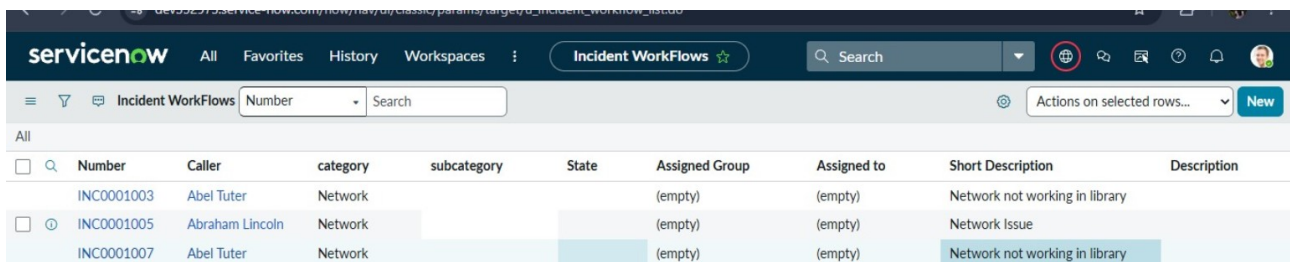

The objective of testing is to ensure that the developed Auto Ticket Classification system works correctly and produces the expected results.

2. Test Scenarios

Test	Input Short Description	Expected Category	Expected Subcategory
1	WiFi not working in library	Network	Wi-Fi
2	Projector not turning on	Hardware	Projector
3	Forgot password for login	Access	Forgot Password
4	Computer is slow and hanging	Performance	Slow Computer

3. Supplied Testing Evidence

The supplied screenshot shows the Incident Workflows list after ticket creation. The records display automatically assigned Network category values for network-related test descriptions.

The screenshot displays the ServiceNow 'Incident Workflows' list. The table contains three records, all with the 'category' set to 'Network'. The first record (INC0001003) has the short description 'Network not working in library'. The second record (INC0001005) has the short description 'Network Issue'. The third record (INC0001007) has the short description 'Network not working in library'. The 'Assigned Group' and 'Assigned to' fields are empty for all records.

	Number	Caller	category	subcategory	State	Assigned Group	Assigned to	Short Description	Description
☐	INC0001003	Abel Tuter	Network			(empty)	(empty)	Network not working in library	
☐	INC0001005	Abraham Lincoln	Network			(empty)	(empty)	Network Issue	
☐	INC0001007	Abel Tuter	Network			(empty)	(empty)	Network not working in library	

Figure 1. Incident Workflows records showing automatically populated Network category values for network-related tickets.

4. Validation Checks

- Ticket number is generated correctly.
- Category is automatically assigned.
- Subcategory is automatically assigned.
- Category and Subcategory values are correct.
- Email notification is generated.
- Ticket information is stored correctly.

5. Testing Result

The test scenarios are used to validate the end-to-end ticket classification and email notification process.

Note: Only the two screenshots supplied by the student are inserted in this submission. Additional test screenshots can be added later if available.
